

## DermaFoam™ Waterproof Foam Wound Dressing

DermaFoam™ is a highly absorbent foam dressing that wicks wound exudate to reduce the risk for maceration in moderate to heavily draining wounds. It has a waterproof polyurethane film backing to prevent strikethrough of exudate. DermaFoam™ is non-adhesive so it is easy to remove; it can be cut to size for irregularly shaped wounds and needs to be secured in place.

**Benefits:**

- Supports moist wound healing and autolytic debridement
- Excellent exudate management to minimize maceration
- Supports normalization of wound bed temperature
- Absorption, support and cushioning help manage hypergranulation tissue
- Latex free

**Indications:**

A primary dressing that may be used for the management of acute or chronic partial and full thickness wounds/ulcers with moderate to heavy exudate.

Product	Size	Reorder #	Units	HCPC
DermaFoam	2x2	00290E	10/Box	A6209
