**Indications:** A skin protectant indicated for management of skin folds and other skin-to-skin contact areas. Reduces microbial colonization in the fabric.

**Description:** A non-sterile skin protectant comprised of polyurethane coated polyester fabric impregnated with an antimicrobial silver complex as the active component. The fabric provides moisture transportation to keep skin dry while the antimicrobial in the fabric reduces odor. The fabric's low friction surface acts as a lubrication aid thereby reducing skin-to-skin friction. Provides a protective environment for the skin and an effective protection against microbial contamination in the fabric. The product reduces colonization of bacteria and yeast such as *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Pseudomonas aeruginosa*, and *Candida albicans*. InterDry® fabric contains 0.019% silver.

*This product and its use may be covered by one or more of the following U.S. Patents and their foreign equivalents: U.S. Patent No. 6,821,936 and U.S. Patent 7,291,570. This product and its use may also be the subject of one or more pending U.S. and/or foreign patent applications.*

**Precautions:** InterDry® fabric is not a wound dressing and should not be placed directly onto an open wound. Should not be used by people with a known sensitivity to silver.

**Warnings:** May cause transient skin staining. Excessive absorption of silver into the body may cause the skin to obtain a blue-grey appearance (Argyria). The safe use of InterDry® fabric during pregnancy, lactation and on children has not been demonstrated. May not be used to protect against urine and feces. If such soiling occurs, the fabric must be changed immediately. Creams or ointments used in conjunction with InterDry® fabric may reduce the efficacy of the product. In vitro studies with this product have been shown to cause mild biological reactivity.

**Storage:** Store in a clean, dry environment in original packaging.
